DETAILED ACTION

Request for Continued Examination

The request filed on for a Request for Continued Examination (RCE) under 37 CFR 1.114 based on parent Application No. 09/229,589 is acceptable and a RCE has been established. An action on the RCE follows.

This communication is in response to applicant's 4/3/2002 amendment in the application of YEGOSHIN for **"METHOD AND APPARATUS FOR CREATING AND DISTRIBUTING COST TELEPHONY-SWITCHING FUNCTIONALITY WITHIN AN IP NETWORK"** filed 01/13/1999. The amendments to the claims have been entered. No claims have been canceled. No claims have been added. Claims 1-17 are now pending.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1, 3- 7, 9-15, and 17 are rejected under 35 U.S.C. 102(e) as being anticipated by Guy et al. (US 5,940,479).

Regarding claims 1, 3-5, 7, 9-11, 13-15, and 17, Guy et al. disclose a system and method for transmitting packet across a wide area network (WAN) from a local phone coupled to a computer e.g., PC-phone. The system comprises of:

- at least two PC-phones 103/105 and 143/145 (*Internet capable call appliances*) located in different location,
- a first router 114 coupled to the PC-phone 103/105,
- a second router 132 coupled to the PC-phone 143/145, and
- a WAN network (Internet or ATM or frame relay) for connecting between the two routers.

The calls setup between the call appliance 103/105 and the router 114 (*end node leg*), and the call setup between the router 114 and 132 through the Internet 104 (*intermediate legs*), the call setup between the router 132 and the called appliance 143/145 (*end node leg*) and are separate and distinct (**see figs. 1, 5; and col. 4 line 54 to col. 6 line 35**).

Regarding claims 6 and 12, Guy et al. disclose a LAN network 116, connecting end appliances at one or more the routers, and wherein end-node leg are established via LAN to appliances on the LAN (**see fig. 1**).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2, 8, and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Guy et al. in view of Andrews et al. (US 5,848,143).

Claims 2, 8, and 16, Guy et al. fail to disclose the call appliances include Interactive Voice Response (IVR) units. Andrew et al., on the other hand, teach IVR units are included in agent systems of a communication system that provides telephony communication between agents and a plurality of callers (**see figs. 8-10**). Therefore, it would have been obvious to one having ordinary skill in the art at the time of invention was made to include the IVRs of Andrews et al., in the system taught by Guy et al. for improving requested information to the caller 24 hours a day without human assistant -thus enhancing customer service while reducing costs.

Response to Arguments

Applicant's arguments filed 4/3/2002 have been fully considered but they are not persuasive.

In page 7 the Applicant argued that:

The portion further recites that the call appliance 143/145 is also coupled to LAN 134, but makes no mention. or suggestion of call appliance 143/145 communicating through the various elements to the other call appliance 103/105, wherein one call appliance is the originator of the call and the other call appliance is the end destination phone, and termination point of the call, as in applicant's invention.

In response to the argument, figure 1 shows call appliance 103/105 connected to router 114 communicate with call appliance 143/145 connected to router 132 via interface 123. In col. 5 lines 66 to col. 6 line 35, Guy discloses there is additional necessary step must be perform if the destination call is for phone 142 connected PSTN 140. Also, see the previous Office Action (paper no. 11) for more detail.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any response to this final action should be mailed to:
